# WPC FENCING BOARD

Wood-plastic composite decking we supply contains 30%-50% HOPE and 50% wood fibre. Among the fibre's constituents are wood fibre, pigments, anti-UV agents, preservatives, etc.

These are the main characteristics of wood-plastic composites: high density, durability, clean, stylish, can be used for 25-30 years and is 100% recyclable. The material is resistant to corrosion, moisture, and termites, as well as being mass and splinter-free, making it ideal for outdoor use.

# ALUMINUM FENCE ACCESSORIES

**PVC LATTICE**

---

**SPRAYED ALUMINUM POST**  
W\*H mm: 80\*80

---

**SPRAYED ALUMINUM RAIL**  
W\*H mm: 43\*24/31 \*24

---

**POST SURFACE MOUNT**

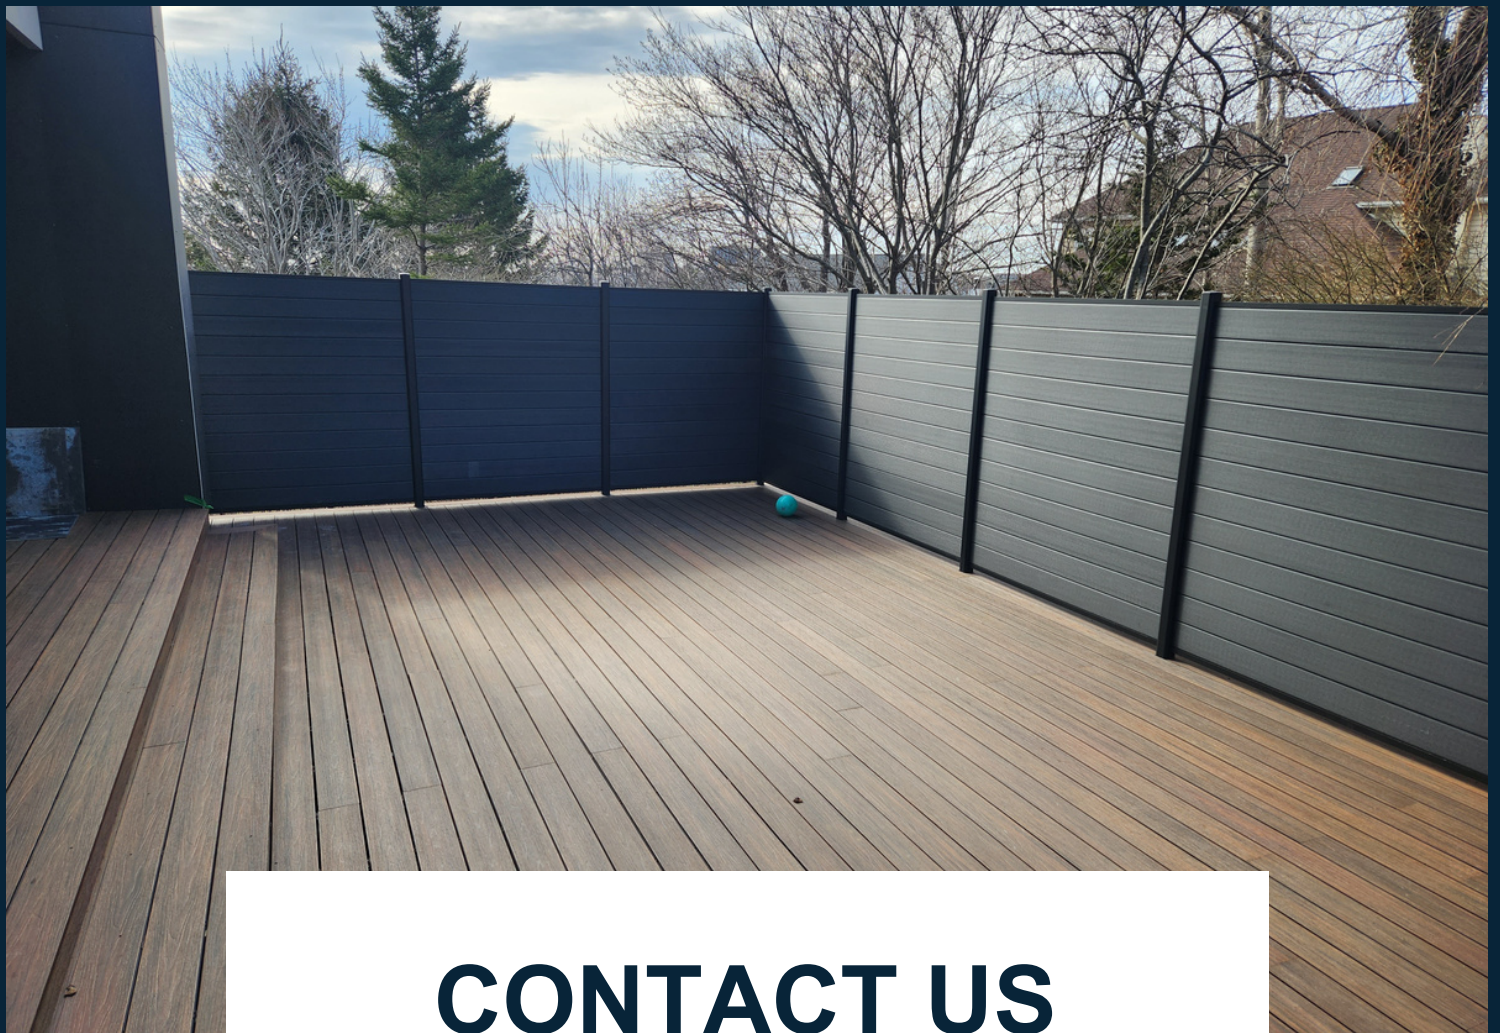

# COLOR SELECTION

Make your outdoor living space more vibrant with the colours of nature. Composite fences are available in a range of colours.

It is possible that the actual colours of individual boards and railing products may slightly differ from those shown in photographs.

Samples are available upon request.
